Advanced Principles in Quick Response Manufacturing (QRM)

By applying Quick Response Manufacturing (QRM) to create ultra-short lead times, many manufacturers have increased their quality, productivity, and sales. However, after seeing significant results initially, progress often plateaus.

This workshop, led by Bill Ritchie, will delve into some of the more complex components so that QRM companies can breakthrough to the next level of performance.

Topics covered will include:

- System Dynamics
- Applying POLCA, the improved Kanban control for QRM companies
- Determining the benefit of QRM projects
- Sustaining QRM in the organization
- A simulation of Quick Response Office Cells (Q-ROC's)

While not required, it is strongly suggested that attendees have a basic level of understanding and training in QRM.

This workshop is required for those who want to obtain the Tempus Institute QRM Level Two Certificate.

To learn more about the QRM Certificate program, visit TempusInstitute.com

Lunch will be included
